

Paper Requirements

Paper definition:

Researchers and faculty continuously generate results which may be important to the community. Researchers write an article/report/paper in a certain format and submit to any research organization such as IEEE, ASEE, ACM, etc which review the submitted article/paper and if it is approved, it will be published.

Requirements:

You are not required to generate new results but you are required to pick a topic that answer a certain problem/question, download and read a few papers that explore the problem/topic. You then need to summarize all your findings in one report/paper. Finally, you need to analyze the proposed solutions and propose your own solution if you can. There is no need to implement your proposed solution. It will be optimal if you can implement any aspect of the selected problem.

The format of your paper should be in the IEEE format (see the attached file). You are required to submit at least full 5 pages.

Grading:

Grading will focus on the selected problem, your summary, writing quality, references, your analysis, and your proposed solution and implementation.
